

Your name lives in **two** **places.**

The copy that greets you
and the copy every feature
reads are two different
records.

SWIPE →

Two Places at Once.

@SRIVARDHANJALAN

THE HONEST SAVE

One Save writes both.

UPDATE

Save your name

One Save fans out to two stores. Write only the first and the record the rest of the app reads goes stale the instant you rename yourself.

The original app wrote only Clerk, so the backend copy went stale. The accent write is the one line that keeps both honest.

THE RULE I KEPT

**Write every copy that
reads it.**

A fact in one place is easy. In two,
only discipline keeps them equal.

PADDING IS DATA

Store it
padded.
Load it
stripped.

Match both ends of the
round trip, and the saved
date loads right back
onto the wheels.

DELETING YOU FOR GOOD

Delete the irreversible thing **first.**

Two writes tear the account down. Order them so the one that can fail leaves only harmless state behind.

TWO PLACES AT ONCE

5 / 7

THE PAYOFF

"Couldn't find your account."

I typed DELETE into my own app, signed back in with the right password, and it didn't know me.

ZERO TO SHIPPED · STEP 05

**The full write-up is
free on Medium.**
