

Your name lives in **two** **places.**

Clerk greets you by it. The backend keeps the copy every later feature reads. Edit one, and they quietly disagree.

SWIPE →

Two Places at Once.

@SRIVARDHANJALAN

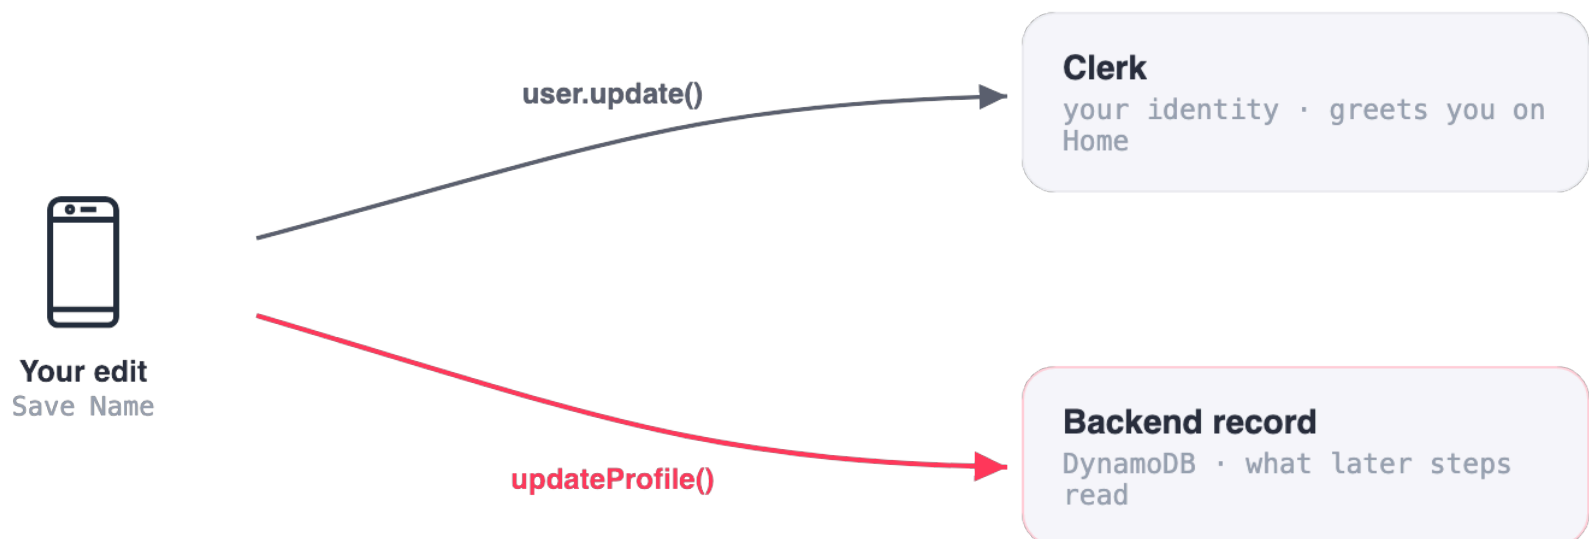

THE BUG I SHIPPED

One Save has to reach **both**.

UPDATE

Save your name

One Save fans out to two stores. Write only the first and the record the rest of the app reads goes stale the instant you rename yourself.

The original app wrote only Clerk, so the backend copy went stale. The accent write is the one line that keeps both honest.

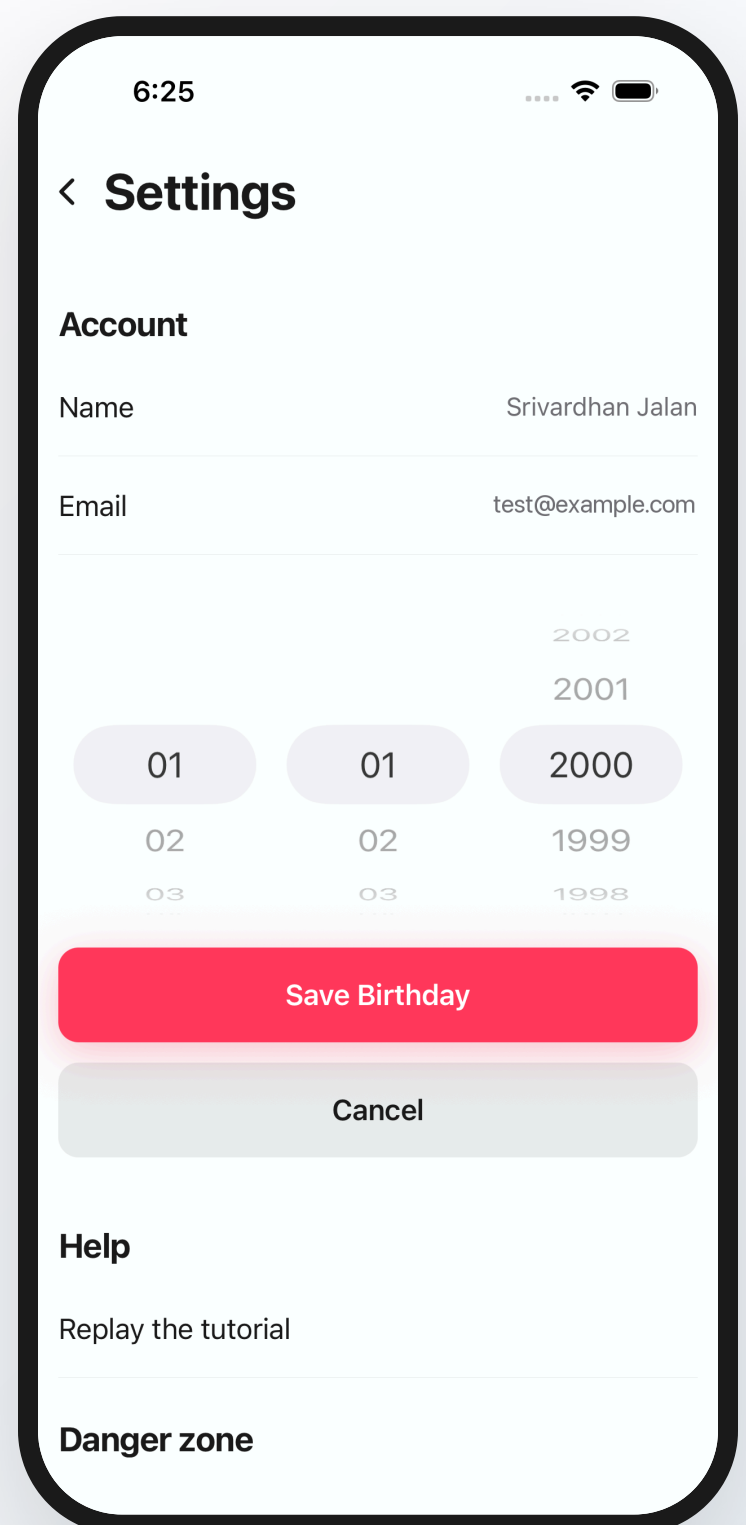

THE RULE I TOOK FROM IT

A fact kept in two places, edited in one, is a bug with a delay on it.

PADDING IS DATA

Store it
padded.
Load it
stripped.

Skip the symmetry and
three wheels come up
blank on a date that's
plainly saved. Match it,
and they land back on it.

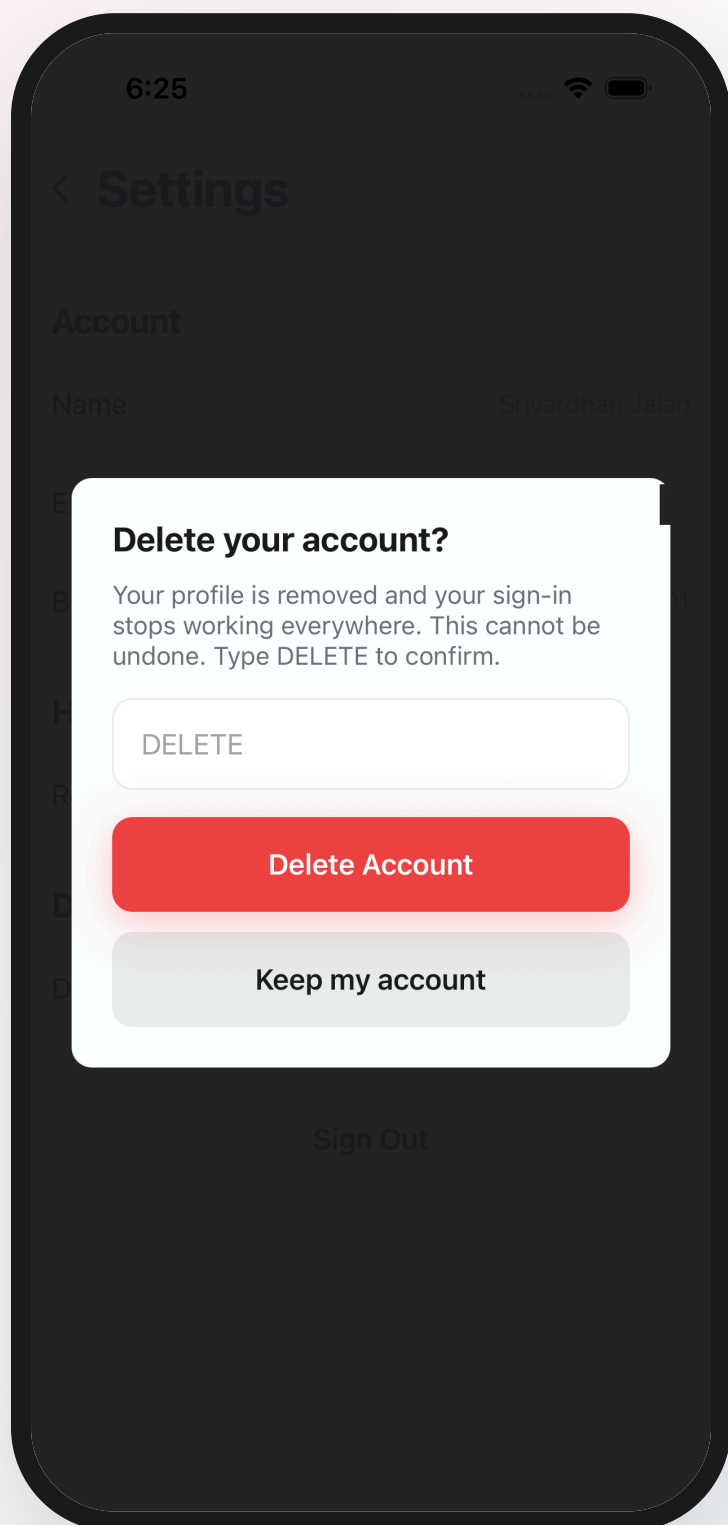

TWO PLACES AT ONCE

4 / 7

DELETING YOU FOR GOOD

Delete the irreversible thing **first.**

Two writes tear the account down: revoke Clerk, flag the record. Order them so whichever one fails, the state left behind is the harmless one.

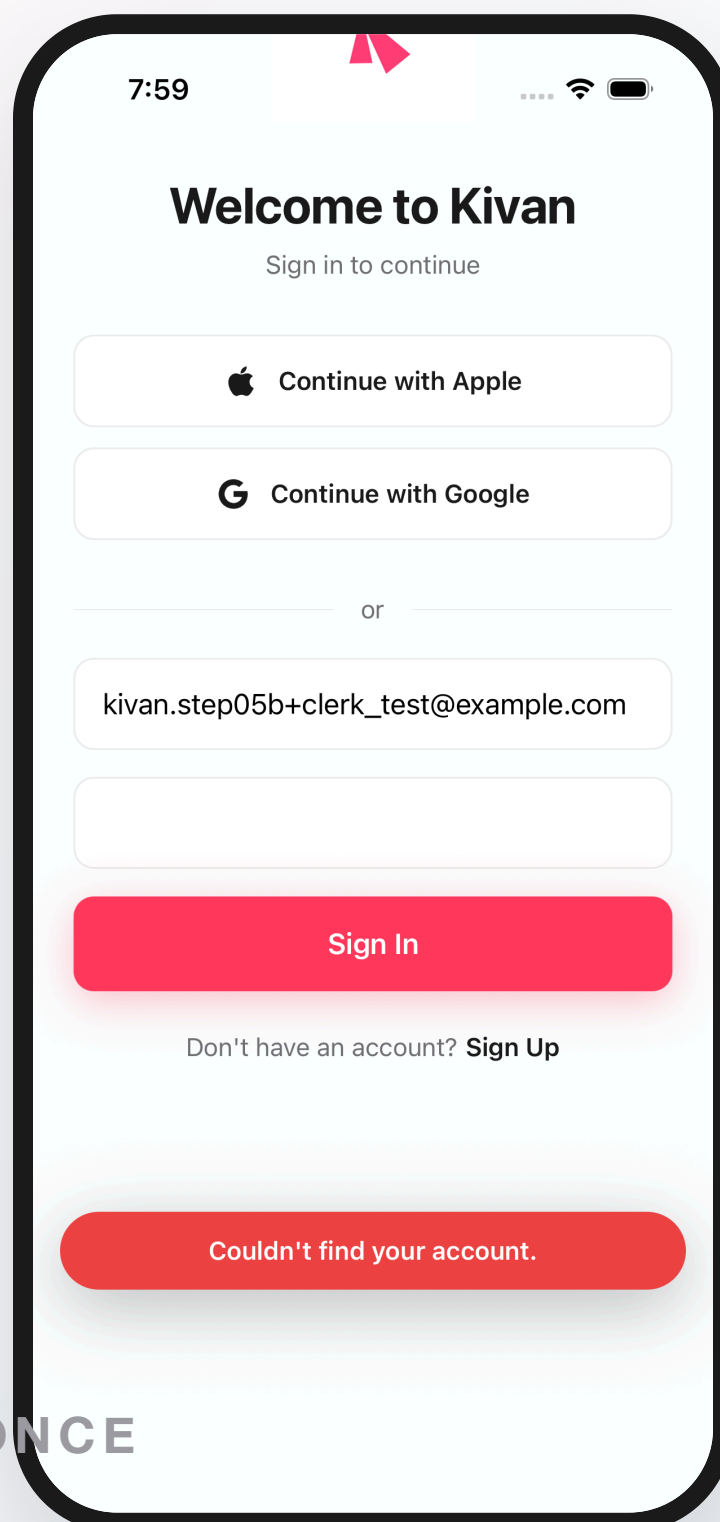

TWO PLACES AT ONCE

5 / 7

"Couldn't find your account."

I typed DELETE into my own app, signed back in with the right password, and it didn't know me.

ZERO TO SHIPPED · STEP 05

**The full write-up is
free on Medium.**
