

The deploy died. The logs were empty.

The same image ran
perfectly on my laptop.

SWIPE →

```
attempt 1

$ terraform apply
aws_apprunner_service: Still creating... [02m50s]
aws_apprunner_service: CREATE_FAILED
$ aws logs tail .../application
(empty - the container never spoke)
same image, runs perfectly on the laptop...
```

Alive on Arrival.

@SRIVARDHANJALAN

THE PAYOFF THAT STORY INTERRUPTED

A FastAPI backend on your own AWS — in four commands.

```
# 1 · the registry first
$ terraform apply -target=aws_ecr_repository.backend
# 2 · build amd64 → push
$ ./scripts/deploy.sh
# 3 · the service (~5 min)
$ terraform apply
# 4 · instant re-run: tags the log groups
$ ./scripts/deploy.sh
```

THE RULE

Nothing joins before its **first caller**.

2

lines in
requirements.txt

1

router: health.py

0

databases, queues,
auth

They arrive with the steps that consume them.

THE DISCIPLINE

**Every resource
tagged, grouped, and
provably gone.**

Destroy, sweep, tag-search: nothing remains.

CREATE_FAILED · EMPTY LOGS

**“Two completely
different causes share
this identical
symptom.”**

SAME CODE, DIFFERENT MANIFEST

Dead on arrival vs **alive on arrival.**

DEAD ON ARRIVAL

A terminal window titled "attempt 1" with a dark background. It shows the following commands and output:

```
$ terraform apply
aws_apprunner_service: Still creating... [02m50s]
aws_apprunner_service: CREATE_FAILED
$ aws logs tail .../application
(empty - the container never spoke)
same image, runs perfectly on the laptop...
```

ALIVE ON ARRIVAL

A terminal window titled "attempt 2 - attestation-free push" with a dark background. It shows the following commands and output:

```
$ ./scripts/deploy.sh # --provenance=false --sbom=false
$ terraform apply
aws_apprunner_service: RUNNING ✓
$ curl https://...awsapprunner.com/health
{"status": "healthy"}
same code. different manifest.
```

The wrong build context, and default attestations. One script now prevents both.

THE PROOF OF LIFE

The app tells the **truth.**

Green when healthy. Red — pointing at the likely culprit — when it isn't.

ZERO TO SHIPPED · STEP 03

The full build, step by step, **free on Medium.**
